

There's a DUCKBILL model for every application...

We offer four Aluminum Duckbill Earth Anchors ranging from light to medium duty holding capacities as well as three Ductile Iron anchors for rocky and very hard soils. Duckbill Earth Anchors can be cabled with a variety of tendons. From galvanized aircraft cable for normal usage to stainless steel for superior corrosion resistance, Duckbill can adapt to all your needs.

Aluminum Anchors

Model 40

The smallest Duckbill anchor used for light holding capacities. Anchor is cabled with 1/16 inch (1.6 mm) cable. For more aggressive soil, can be cabled with 1/8 inch (3.2mm) cable.

Model 68

The second smallest Duckbill anchor used for medium holding capacities. Anchor is cabled with 1/8 inch (3.2mm) cable. For more aggressive soil, can be cabled with 3/16 inch (4.8mm) cable.

Model 88

The 88-DB is the most common of the Duckbill anchors. Anchor is cabled with 1/4 inch (6.4mm) cable. For more aggressive soil, can be cabled with 5/16 inch (7.9 mm) cable.

Model 138

The largest of the Duckbill anchors. Anchor is cabled with 5/16 inch (7.9 mm) cable. This anchor must be installed with a small jackhammer.
