

There's a MANTA RAY model for every application

There are six MANTA RAY utility anchors with light to super heavy duty holding capacities. All MANTA RAY anchors are made of galvanized ductile iron, can be driven with the same drive steel set and can be tested to the desired holding capacity with the Anchor Locker.

NO MORE GUESSWORK!

MK-B

Largest of the MANTA RAY anchors and is only used in the very soft and usually wet Class 7 – 8 soils to accommodate up to 32M* guy capacity. Because of its large size and length, the MK-B exhibits a larger pull-back during anchor locking than the rest of the MANTA RAY anchor family. For this reason, the MK-B is routinely not driven any less than 14 feet deep prior to anchor locking. Use with 1" (25mm) Utility Anchor rod.

MR-SR

The second largest of the MANTA RAY anchors. It is designed to accommodate 32M* guy capacity in softer class 5 – 6 soils. In extremely soft, wet class 7 – 8 soils it may be able to accommodate 12M* or 18M* guy capacity. Use with 1" or 3/4" (25mm or 19mm) Utility Anchor rod.

MR-1

The MR-1 is the most common of the MANTA RAY anchors. It is designed to accommodate 32M* guy capacity in normal (medium) class 3 – 5 soils. In softer class 6 soils it can accommodate 18M* and 12M* guy capacity. Use with 1" or 3/4" (25mm or 19mm) Utility Anchor rod.

MR-2

The fourth largest of the MANTA RAY anchors. It is designed to accommodate 32M* guy capacity in hard class 1 – 3 soils. In normal (medium) class 4 – 5 soils it can accommodate 18M* and 12M* guy capacity. Use with 1" or 3/4" (25mm or 19mm) Utility Anchor rod.

MR-3

Slightly larger than the MR-4 and is designed to accommodate 18M* guy capacity in Class 1 – 5 soils and 12M* Guy Capacity in Class 1-6 soils. The MR-3 is the anchor of choice for most CATV applications. Use with 5/8" (16mm) Utility Anchor rod.

MR-4

The smallest of the MANTA RAY anchors. It is designed to accommodate 12M* guy capacity in Class 1 – 3 soils. Use with 5/8" (16mm) Utility Anchor rod.
